

CLAIMS

WHAT IS CLAIMED IS:

1. A computer mouse, comprising:
a top portion;
a bottom portion;
wherein the top portion is quickly detachably attached to the bottom portion; and
wherein the top portion and the bottom portion enclose elements adapted to
provide computer mouse functionality.
2. The computer mouse of claim 1, further comprising at least one button on the top portion.
3. The computer mouse of claim 1, further comprising a hole in a back portion of the top portion.
4. The computer mouse of claim 3, further comprising a button-like member attached to the bottom portion.
5. The computer mouse of claim 4, wherein the hole is adapted to receive the button-like member in order to secure the top portion to the bottom portion.
6. The computer mouse of claim 1 further comprising at least one prong coupled to the top portion.
7. The computer mouse of claim 6, wherein the at least one prong is adapted to couple to the bottom portion in order to secure the top portion to the bottom portion.
8. The computer mouse of claim 1 further comprising at least one of the following elements depicted on the top portion from a group consisting of:
a logo;

a word;
an image; and
any combination of a logo, a word, or an image.

9. The computer mouse of claim 1, wherein the top portion is comprised of a plurality of portions.

10. The computer mouse of claim 1, wherein the bottom portion is comprised of a plurality of portions.

11. A device, comprising:
a top portion;
a bottom portion;
wherein the top portion and the bottom portion are adapted to display a logo, a word, an image, or any combination of a logo, a word, or an image;
wherein the top portion is quickly detachably attached to the bottom portion; and
wherein the top portion and the bottom portion enclose elements adapted to provide computer functionality.

12. The device of claim 11, wherein the device is adapted to communicate with a computer via a wired connection.

13. The device of claim 11, wherein the device is adapted to communicate with a computer via a wireless connection.

14. The device of claim 11, wherein the top portion and the bottom portion are detachably attached to each other via at least one of a following element associated with the top portion, the bottom portion, or both the top portion and the bottom portion, from a group consisting of:

a hole and a button-like member;
at least one prong;

at least one clipping apparatus;
at least one snapping apparatus; and
at least one protrusion.

15. The device of claim 14, wherein the button-like member can be pushed to detach the top portion from the bottom portion.

16. The device of claim 11, wherein the logo, the word, the image, or any combination of the logo, the word, or the image is printed.

17. The device of claim 11, wherein the logo, the word, the image, or any combination of the logo, the word, or the image is silk screened.

18. The device of claim 11, wherein the device is adapted to provide computer functionality to a plurality of devices at a plurality of locations.

19. A computer mouse containing standard electrical components and mechanisms, the mouse comprising:

a top portion comprising a hole;
a bottom portion comprising a button-like member, wherein the button like member is adapted to engage the hole to secure the top portion to the bottom portion; and
a port in the top portion, the bottom portion, or a combination of the top portion and the bottom portion adapted to provide connectivity to a computer.

20. The computer mouse of claim 19 further comprising a hole in the bottom portion adapted to engage a roller-ball.
